A Workshop on Sustainable Green Concrete

Al Ain University recently collaborated with Zublin Construction LLC to organize an impactful workshop titled “Practical Applications of Sustainable Green Concrete” at the company’s headquarters. The workshop was led by Dr. Omar Najm, a faculty member in the civil engineering program and an expert in sustainable construction practices. Zublin Construction showed great interest in hosting the workshop to enhance its performance across various projects. Dr. Najm provided valuable insights into the latest advancements in sustainable concrete technology, focusing on practical applications such as the use of recycled materials and alternative binders. He also discussed the industry’s challenges and limitations in implementing these innovative solutions. The workshop included productive discussions and real-world case studies, allowing Zublin’s construction team to engage directly with Dr. Najm and explore how these sustainable practices can be effectively integrated into their ongoing and future projects. This collaboration highlights Al Ain University’s commitment to supporting

industry growth through knowledge sharing. By bringing expert insights to Zublin Construction, the workshop aims to promote sustainable practices that can lead to improved project outcomes. Looking ahead, both Al Ain University and Zublin Construction are eager to further their collaboration, which could pave the way for joint research initiatives and professional development opportunities, reinforcing a shared commitment to advancing sustainability in the construction sector. Participants left the workshop inspired and equipped to make a positive impact on their projects and the environment.
